Printing to an ASCII File

In this tutorial we show how to write data to an ascii file

```
# First open the ascii file
# Note we do NOT use the cdms.open here!
f=open('text.txt','w')

# Now writing to the file works just like writing to the screen
print >> f, '# Example file to write data to it'

# At the end do not forget to close the file
f.close()
```
